Supplementary Materials

1. Content analysis codebook

2. Result tables

Table B1. *Krippendorff's alpha and agreement ratings for the codebook versions 2 and 4 (final version)*

Table B2. *Secondary topics in environment related TikTok videos*

Table B3. *Participation structures - context in which environmental issues were discussed in TikTok videos*

Table B4. *Participation structures – whether the creator discussed their own or others' experiences*

Table B5. *Keying or tone expressed in environment related TikTok videos*

Table B6. *Communicative function of environment related TikTok videos*

Table B7. *Types of social actors and proportion of content produced by them on environment related TikTok*

Table B8. *Regression measures (estimates, standard errors, 95% CIs, z-values, and p-values) for engagement by message characteristics– number of plays*

Table B9. *Regression measures (estimates, standard errors, 95% CIs, z-values, and p-values) for engagement by message characteristics – number of likes*

Table B10. *Regression measures (estimates, standard errors, 95% CIs, z-values, and p-values) for engagement by message characteristics – number of comments*

Table B11. *Regression measures (estimates, standard errors, 95% CIs, z-values, and p-values) for engagement by message characteristics – number of shares*

Table B12. *Regression measures (estimates, standard errors, 95% CIs, and p-values) for engagement by social actors*

Coding Protocol – version 4 (Final)

<last updated: July 31, 2023>

Study Aims

The study aims to provide an overview of the environmental discussions on TikTok. First, we will analyse and describe the messaging in environment-related videos according to a typology proposed by Shifman (2013). We will describe the content (e.g., topics), form (e.g., audio-visual elements), and stance (e.g., communicative strategies) for environment-related videos. Second, we will examine the creators of these videos to identify the types of social actors that post environment-related videos. Third, we will examine audience engagement (number of views, likes, comments and shares) with different types of environment-related videos and social actors. A content analysis of English and Spanish language TikTok videos will be conducted and differences across languages will be analysed.

Information about the codebook

This codebook operationally defines the variables and categories used to code environment related TikTok videos, along with some example videos for these categories. The example videos in this codebook are not included in our dataset.

This is an updated version (v4) of previous codebooks, further clarified and refined after discussions among all coders, including the first author, after an introductory round of coding (*n* = 10).
Version 3 was developed after discussions among all four co-authors. Three of the co-authors also coded a randomly sampled subset (*n* = 10) prior to these discussions.
Version 2 was developed to add clarifications wherever necessary, based on discussions among all four co-authors who coded a randomly sampled subset (*n* = 10).
Version 1 was developed based on previous studies of video content in the literature (Blum-Kulka, 2005; Shifman, 2013; Vizcaíno-Verdú & Abidin, 2022; Welbourne & Grant, 2016) and open coding of a 10% subset (*n* = 102) by the first author.

The final version of this codebook will be uploaded on Open Science Framework (OSF).

Units of Analysis – Environmental Content

For the purpose of this study, we define environmental content on TikTok as videos depicting the interrelationships between people and the natural environment as well as videos depicting nature and natural phenomena (*Aims and Scope - Journal of Environmental Psychology*, 2023).

Inclusion criteria (should meet all criteria to be included)

- Videos retrieved by using a list of 30 popular hashtags (most frequently occurring hashtags with greatest number of views) based on predetermined list of search terms derived from the Planetary boundaries framework (Rockström et al., 2009) and previous studies of environmental content on social media (Gaytan Camarillo et al., 2021; Veltri & Atanasova, 2017).

- Hashtags used to retrieve environment related TikTok videos:
  - English:

    1. #vegan
    2. #agriculture
    3. #climatechange
    4. #zerowaste
    5. #sustainability
    6. #forest
    7. #plantbased
    8. #recycle
    9. #vegetarian
    10. #biodiversity
    11. #carbon
    12. #climate
    13. #solarenergy
    14. #smog
    15. #reuserecycle
    16. #reuse
    17. #renewableenergy
    18. #fossilfuels
    19. #oilspill
    20. #rainforestfacts
    21. #rainforest
    22. #pollution
    23. #plantbasedrecipes
    24. #innovation
    25. #globalwarming
    26. #foodwaste
    27. #environment
    28. #emission
    29. #eco
    30. #biodegradable

  - Spanish:

    1. #medioambiente
    2. #agua
    3. #vegano
    4. #energiarenovable
    5. #sostenible
    6. #cambioclimatico
    7. #calentamientoglobal
    8. #solar
    9. #planeta
    10. #contaminacion
    11. #energia
    12. #sustentable
    13. #sostenibilidad
    14. #panelessolares
    15. #biodiversidad
    16. #zerowaste
    17. #reutilizar
    18. #selva
    19. #naturaleza
    20. #vegetariano
    21. #ecologico
    22. #biodegradable
    23. #contaminantes
    24. #animales
    25. #biosfera
    26. #metano
    27. #emisiones
    28. #energiaasolar
    29. #renovable
    30. #bosque

- Videos related to environmental topics including but not limited to climate change, natural resources, sustainability, conservation, wildlife, ecosystems, water, environmental health,

food and agriculture, energy, and emerging technologies (*Environmental Communication Aims and Scope*, 2023).

Exclusion criteria (should meet at least one criterion to be excluded)

- ***Duplicate posts***[1]
  Same post from the same account (i.e., same video, same caption, same account) as retrieved by the API due to overlapping hashtags and/or accounts. Similar videos (re)posted from different accounts (may or may not have different captions and/or hashtags) are included because their engagement metrics will differ.
- ***Duplicate videos***[2]
  Video contains environment-related hashtags as well as an environmental message but is posted multiple times from the same account (i.e., same video, different caption, same account). One video is already included in the sample so other videos are excluded to avoid duplicate videos.
- ***Non-English / Non-Spanish videos***
  Video is in a language other than English/Spanish even when English/Spanish hashtags are present in the post.
- ***Content related criteria***
  - Post does not contain environment-related hashtags and the video does not contain an environmental message (e.g., videos retrieved from accounts that do not post environmental content regularly; account is mostly used for personal blogging like sharing)
  - Post contains environment-related hashtags, but video does not contain an environmental message.
  - Post contains environment-related hashtags, but post and video do not contain an environmental message because the hashtag has multiple meanings.
    - English examples: Fossil brand watch ads (#fossilfuels); car combustion engines (#carbon); Rainforest Café (#rainforest), non-environmental innovation (#innovation)
    - Spanish examples: Capadeozono brand shoe ads (#capadeozono, translates to ozone layer); Horror movie results and conspiracy theories (#bosque, also translates to forests; Barbecues and tips associated to it (#carbon, barbecuing is a common weekend activity in South American cultures)

[1]A post refers to a TikTok video along with its original caption text.
[2] A video refers to a TikTok video without its caption text.

Coding instructions

The coding will take place using Qualtrics. The data already comply with the inclusion criteria for this study. For each video, coders will select the option that best describes the variable of interest.
For some variables, it is possible to choose multiple options, and this will be indicated as such.
Coders are instructed to select "none of the above" options sparingly and provide brief explanations some choices when indicated.

Coder information (name and IP address), date and time of coding, and the unique ID of the video being coded will be recorded automatically on Qualtrics.
It is possible to return to the Qualtrics survey and continue coding after closing the survey. Use the same link to resume.

Operational Definitions and Codes

Content – Idea and Ideology

- ***Primary Topic (single answer possible)***

central environmental issue emphasised and discussed in the video

- **Climate change** (awareness, rising temperatures, climate clock, etc.)
- **Energy transition** (fossil fuels, renewable energy, solar energy, wind energy, etc.)
- **Environmental pollution** (plastic pollution, ocean pollution, oil spill, microplastics, air pollution, etc.)
- **Extreme weather** (floods, smog, wildfires, etc.)
- **Waste management** (composting, recycle, reduce, reuse, zero waste, etc.)
- **Biodiversity** (flora, fauna, nature scenes, conservation, destruction, connection with nature/animals, etc.)
- **Sustainability** (sustainable brands, eco-friendly replacements, sustainability tips, low emission travel tips, fashion, etc.)
- **Food-related videos** (vegan recipes, vegetarian recipes, recipes from kitchen waste, growing fruits and vegetables – indoors or outdoors)
- **Healthy living** (mentioning human health and/or noting the connection between human health and sustainability)
- **Environmental justice** (colonisation, capitalism, corporate greed, financing of fossil fuel industry, industrial emissions, displacement of native people etc.)
- **Technological environmental innovations** (agricultural tools, irrigation practices, sustainability related technology, etc.)
- **None of the above**
  Describe the topic briefly.

- ***Secondary Topic (optional; multiple answers possible)***

other environmental issues mentioned and/or discussed in the video

- **Climate change** (awareness, rising temperatures, climate clock, etc.)
- **Energy transition** (fossil fuels, renewable energy, solar energy, wind energy, etc.)
- **Environmental pollution** (plastic pollution, ocean pollution, oil spill, microplastics, air pollution, etc.)
- **Extreme weather** (floods, smog, wildfires, etc.)
- **Waste management** (composting, recycle, reduce, reuse, zero waste, etc.)
- **Biodiversity** (flora, fauna, nature scenes, conservation, destruction, connection with nature/animals, etc.)
- **Sustainability** (sustainable brands, eco-friendly replacements, sustainability tips, low emission travel tips, fashion, etc.)
- **Food-related videos** (vegan recipes, vegetarian recipes, recipes from kitchen waste, growing fruits and vegetables – indoors or outdoors)
- **Healthy living** (mentioning human health and/or noting the connection between human health and sustainability)

- **Environmental justice** (colonisation, capitalism, corporate greed, financing of fossil fuel industry, industrial emissions, displacement of native people etc.)
- **Technological environmental innovations** (agricultural tools, irrigation practices, sustainability related technology, etc.)

- **Environment-related sentiment (single answer possible)**
  - **Video conveys a pro-environmental message** (information or behaviour intended to benefit the natural environment and/or avoiding harming it)
  - **Video conveys an anti-environmental message** *(*information or behaviour intended (or unintended) to harm the natural environment and/or avoiding protecting it)
  - **Video conveys a neutral message towards the environment** (neither pro-environmental nor anti-environmental)
  - **Video conveys an ambiguous message towards the environment** (both pro-environmental and anti-environmental)

- **Ideology (single answer possible)**

(a fully formed environmental belief system or a way of thinking about the natural world that a person uses to justify actions toward it)

- **Environmental ideology is explicit in the video.**
  - ➢ if selected: which of the following ideologies best describes the video? (select one)
- **Environmental ideology is not explicit in the video.**
  - ➢ if selected: which of the following ideologies can be inferred from the video? (select one)

- *Select from:*
  - **Unrestrained instrumentalism** (humans are superior to nature and nature is for our use, e.g., videos showing destruction of biodiversity)
  - **Conservationism** (there should be some restraint in environmental resource use but only to preserve those resources for future human use, e.g., videos depicting eco-friendly shopping, sustainable development goals, energy transition)
  - **Preservationism** (we should protect nature for future human use, but nature is also valuable for other reasons, including ecological, aesthetic, religious, and scientific value, e.g., videos showing beautiful scenes of nature for human enjoyment/experience)
  - **Animal rights** (non-human beings should be given equal opportunity not to suffer (that is their inherent right as living things); e.g., vegan recipe videos)
  - **Land-based ethics** (not just individual creatures but entire ecosystems have value outside of human use and we have a responsibility to not degrade them, e.g., videos showing restoration of local plant species)
  - **Ecological sensibility** (we should respect the interconnectedness of nature and not interfere with it, e.g., videos explaining how marine life/forests/other natural entities are interconnected with human life)
  - **Deep ecology** (all life has "intrinsic value" which means value regardless of human decisions or ideas, e.g., videos explaining how forests/animals/natural entities function, grow, and self-sustain)

- **Social ecology** (capitalism is the root of environmental problems, e.g., videos showing protests against oil/fossil fuel industry)
- **Ecofeminism** (the inequality of women, races, genders, classes, and non-human beings are the intertwined roots of environmental problems, e.g., videos showing how minority rights (women's rights, workers' rights) are related to environmental justice)
- **Native American / Indigenous ideologies** (everything is sacred and to be treated with the utmost care and respect, e.g., videos showing environmental beliefs/practices of indigenous tribes)
- **Eastern traditions** (humans are an integral, interdependent entity in the cosmos, neither essentially nor morally segregated from nature, e.g., videos mentioning eastern philosophies in relation to nature such as the Chinese philosophy of Ying and Yang)

Form – Audio, video, and genre

- **Audio presentation (multiple answers possible)**
  - **Performance** (user is performing someone else's song/dialogue/audio, e.g., lip-syncing) (example)
  - **Original** (audio is created by the user themselves, e.g., by speaking, singing, or adding computer generated voice) (example)
  - ➢ if selected: which of the following apply?
    - **Human voice** (human voice or speech is present, either creator's voice or other people's voice from both original and non-original content; only applies to original audio, *not* when presenter is lip-syncing) (example)
    - **Computer generated voice** (audio contains computer generated voice or speech) (example)
  - **Diegetic audio** (sound that originates from within the video's world, e.g., dialogue, music that originates in the video, sound effects that correspond to activities in the video) (example)
  - **Non-diegetic audio** (sound that does not originate from within the video's world, e.g., songs with lyrics, instrumental music, narration, silence, additional sound effects unrelated to activities in the video) (example)

- **Video presentation (multiple answers possible)**
  - **Original video** (video is recorded by the creator (on their device/equipment)) (example)
  - **Found video** (e.g., news clips, memes, slideshows, snippets of videos in popular culture) (example)
  - **Animated video** (video contains original or found animations) (example)
  - **Timelapse video** (a sequence of frames at set intervals to record changes that take place slowly over time) (example)
  - **Interaction video** (e.g., Duet, Stitch, Reply)

Duets are side by side videos and NOT videos stacked together on top-and-bottom, only side by side). (example duet)
Stitches are two videos played after one another. (example stitch)
Replies are video responses to textual comments where the text of the comments is visible in the video. (example reply)

- **Genre (multiple answers possible)**
  - **Vlog** (the creator delivers or presents content by looking at or talking directly to the camera) (example)
  - **Hosted** (the creator presents the information; however, other people such as members of the public or interviewees are also part of the video content)
    (example)
  - **Interview** (videos where the person delivering content is being interviewed by a person off camera who is (often) the video creator)
    (example)
  - **Presentation** (the creator/presenter addresses an audience without interacting with the camera specifically. This option applies when the presenter is documenting something (e.g., an event or a thing) to the viewers of the TikTok without interacting with the camera themselves)
    (example)
  - **Voice over visuals** (someone talks over static visuals such as a series of photographs. This category only applies when the visuals are static (not moving) or animated)
    (example)
  - **Text over visuals** (text over static visuals such as a series of photographs. This category only applies when the visuals are static (not moving). This text is different from captions or subtitles. (See appendix for examples of captions and auto-generated subtitles))
    (example)

Stance – Participation structures, keying, and communicative function

- **Participation structures (multiple answers possible)**
  - ***Global / Local issues***
    - **Local issues** (creator of the video mainly focuses on environmental issues in their own surroundings (e.g., their backyard, neighbourhood, state, country)
    - **Global issues** (creator of the video mainly focuses on environmental issues around the world (comparing countries/regions, global consequences of climate change, etc.)
    - **Not explicitly mentioned** (video pertains an issue that could occur worldwide)
    - **Unclear from the video**

  - **Personal / Others' experiences**
    - **Personal experiences** (creator shares their own experiences)
    - **Others' experiences** (creator shares other people's experiences)
    - **Not explicitly mentioned** (video relates to an issue that could occur to many people, animals, and nature in general)
    - **Unclear from the video**

- **Keying (single answer possible)**

Select one that applies the most:

- **Funny** (purely humorous, causing laughter or amusement)
  (example)
- **Ironic** (sarcastically humorous, conveys a contrary meaning than expected)
  (example)
- **Mocking** (intended to make fun of someone/something)
  (example)
- **Pretending** (acting as someone else)
  (example)
- **Serious** (a sincere representation of the video topic)
  (example)

- **Communicative functions (single answer possible)**

Select one that applies the most:

- **Referential** (oriented toward the context, or the ''outside world''/ fact /provide information)
  (example)
  - *if selected, choose if the following applies:*
    - ***Myth-busting*** (specifically oriented towards correcting misinformation / disinformation / myths by providing factual information on environmental issues)
- **Emotive** (oriented toward the addresser (i.e., the creator) and their emotions. The person in the video (often the creator) shows strong emotions (e.g., to vent))
  (example)
- **Conative** (oriented toward the addressee (i.e., the viewers) and available paths of actions (e.g., imperatives))
  (example)
  - *if selected, choose if the following apply:*
    - ***Individual actions*** (specifically oriented towards environment-related actions of the individual (e.g., planning for a career in environment-related fields, do-it-yourself videos, environment-friendly shopping, etc.))
    - ***Collective actions*** (specifically oriented towards actions of a group with a common environment-related objective (e.g., videos documenting or promoting organised protests, policy changes, etc.))
- **Phatic** (serves to establish, prolong, or discontinue communication. e.g., duets, replies, stitches)
  (example)
- **Metalingual** (used to establish mutual agreement on the code (for example, a definition))
  (example)
- **Poetic** (focusing on the aesthetic or artistic beauty of the construction of the message itself)
  (example)

Appendix

1. **Difference between text over visuals and auto generated subtitles.**

Figure 1a.
Captions over TikTok videos are shown in red.

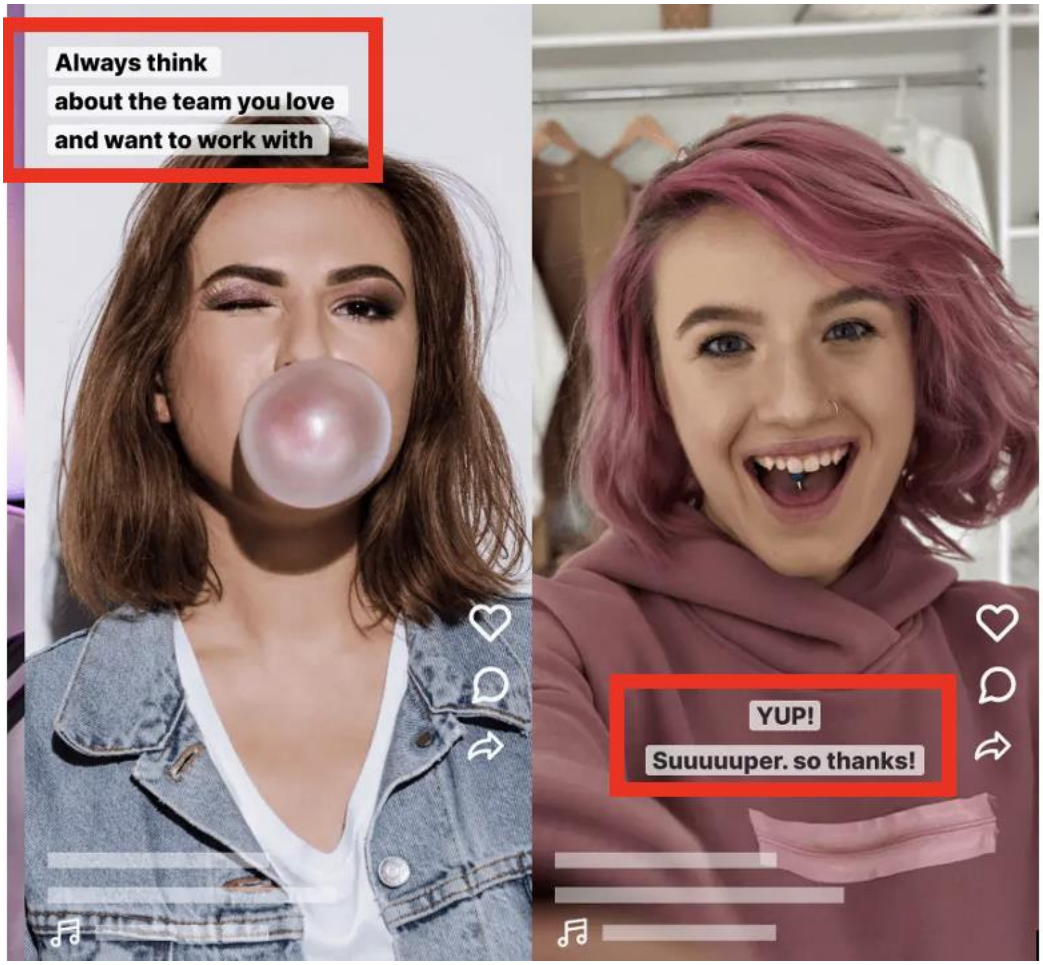

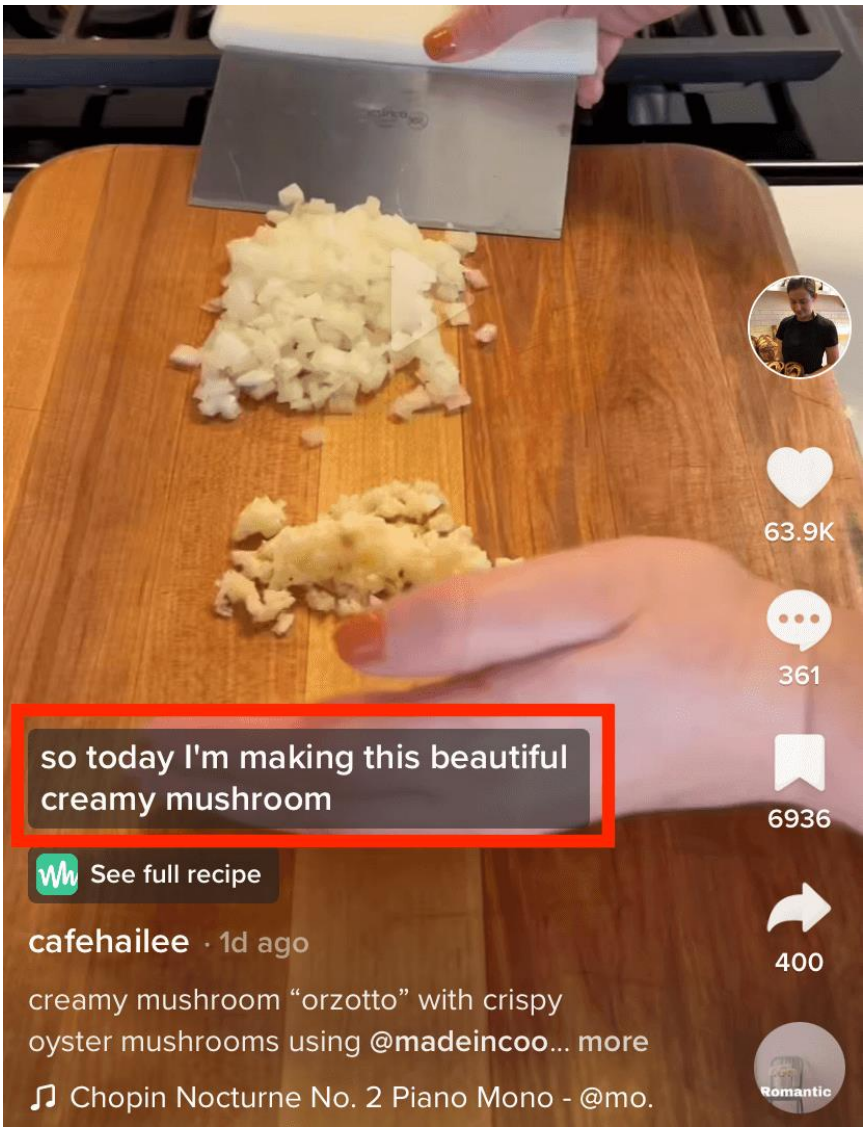

Figure 1b.

Auto-generated subtitles are shown in red.

Tips for Coders

The following clarifications were agreed upon by all the coders during several rounds of coding discussions:

1. **Primary topic**
    i. Select the "environmental" topic that is discussed in most of the video or the topic that is emphasised.
    ii. The examples for each option are suggestive only and do not form a complete list of related topics.
    iii. Primary topic is related to the main message of the video.
    iv. Climate change is only to be selected as a primary topic when it is explicitly mentioned.
    v. Energy transition means TikToks that show energy transition or document the need for energy transition etc. If the video focuses on the innovative aspect of a renewable energy technology, then please select technological innovation as the primary topic.
    vi. Waste management relates to videos showing what can be done with waste. For example, reducing waste, recycling, etc.
        - Videos that show waste (e.g., plastic waste) can be considered for other categories like "environmental pollution", "environmental justice", etc.
        - The primary topic for videos that show recipes with food waste is still coded "Food related videos."
    vii. If a video only shows sustainability tips that can be followed, then "sustainability" is the primary topic in most cases. However, if the video emphasises an aspect of the environment, like biodiversity or environmental justice and then also contains some tips, then sustainability will be coded as a secondary topic.

2. **Secondary topic**
    i. Secondary topics are optional. A maximum of two explicitly mentioned secondary topics can be coded.
    ii. For each video, go over each option in the secondary topics and select those that apply best. In case more than two secondary topics apply, select the first couple that are suitable.
    iii. If no option applies, leave the category blank.

3. **Environment-related sentiment**
    i. A question to ask yourself: Does the video provide information or show behaviours that can help the environment (pro-environmental) or harm the environment (anti-environmental).

ii. If it is unclear from the video whether the information and/or behaviour is aimed to help or harm the environment, select the neutral option.
    - Plant-based recipe videos that do not explicitly state the environmental benefits of vegan/vegetarian food will be marked as neutral.

iii. When both pro- and anti- environmental information and/or behaviour is shown in the video, AND the presenter/creator in the video is not stopping anti-environmental behaviour or not correcting anti-environmental information, only then the video is ambiguous.
    - If a video shows anti-environmental behaviour/information only to correct it, then it is pro-environmental.
    - If a video shows both pro-environmental and anti-environmental information/behaviour, but the aim of the video is not to correct the anti-environmental information/behaviour, then it is ambiguous.

4. Ideology

i. Ideology is only marked as explicit when the creator/presenter of the video talks about environmental reasoning (reasons to protect/harm the environment) out loud.

ii. A question to ask yourself before deciding which ideology applies best: Are the reasons behind sharing the information/behaviour in this video human centred or nature centred?
    - If the reasons (for e.g., to recycle) appear mostly to save human beings or serve them, the ideology lies somewhere between unrestrained instrumentalism and Preservationism).
    - Most plant-based food related videos are marked at having an animal-rights ideology unless reasons unrelated to animal rights are explicitly mentioned for adopting a vegan/vegetarian diet.
    - If the reasons (for e.g., to protest) appear mostly to save nature and conserve it (not for human use), the ideology lies between land-based ethics and social ecology.
    - If the video focuses on the environment in relation to specific subgroups of society like women or Native American peoples, the ideology lies between ecofeminism and eastern traditions.

iii. Ideology – examples:
    - Capitalism/industries are mentioned in the video as the root of environmental problems (Explicit – Social ecology)
    - Food related videos that only show a recipe without talking about the advantages of veganism/vegetarianism for the environment (Implicit – Animal rights)

- Videos providing sustainability tips without the presenter sharing why/how these tips help (or hurt) the environment. (Implicit – Conservationism)
- Videos where creators/presenters talk about protecting nature because it is beautiful to be in or is important for reasons other than providing humans basic sustenance. (Explicit – Preservationism)
- Videos showing wildlife, explaining, or giving information about an animal. (Implicit – Deep Ecology)

5. Audio presentation

i. Human and/or computer voice is only marked for Original Audio.
   - If the video contains original audio by the creator, presence of human voice includes the creator's voice but also any other person's voice in the video.
   - When the creator of the video cannot be heard but other people can still be heard, it is still counted as human voice.

ii. The categories of diegetic and non-diegetic audio can apply together and are not mutually exclusive.
   - Example: A recipe video where the presenter is talking through the recipe with instrumental music overlayed and sounds associated with cooking (e.g., chopping, sizzling) can be heard contains both diegetic and non-diegetic audio. Correct codes for this video are – Original audio, human voice, diegetic audio, non-diegetic audio.
   - Example: A recipe video where the presenter does not talk but shows the recipe with background instrumental music and sounds of cooking can be heard will be coded as – diegetic audio, non-diegetic audio.
   - Example: A recipe video where the presenter is lip-syncing instead of talking and sounds of cooking cannot be heard will be coded as – Performance, non-diegetic audio. Note that a performance video will also always be coded as non-diegetic because the lip-sync track does not originate in or correspond to the video.
   - Performance only applies when the creator is "performing", i.e., lip-syncing or acting out a song or a dialogue.

6. Video presentation

i. This category applies to "video" features only and not static photographs and other visuals.
   - If the video contains a static background *only* (e.g., a series of photographs) then no option applies (you can select from voice over visuals and/or text over visuals from the next category of Genre).

- If the video contains a static background *and* the creator is visible, the option of original video may apply if the creator has recorded this video.
- Found video only applies when non-original "video" content is present. This can be any type of video that is not recorded by the creator and is taken from the internet. GIFs count as video content as they have motion in them.
- Presentation relates to if/how the presenter in the video interacts with the camera. This does not mean ppt/slides/photo slideshows with music in the background.

7. Genre

i. A vlog differs from a presentation based on whether the creator of the video is looking into the camera.
   - If the creator is talking/presenting information while directly looking into the camera, it is a vlog.
   - If the creator does not directly look into the camera but can be heard/seen documenting something, then it is a presentation.

ii. If a video starts by the creator looking into the camera and talking but then goes onto show snippets of other content (e.g., screenshots, other video clips) then select all categories that apply.
   - Example: Creator provides sustainability tips without looking into the camera but via other "video" clips. Codes – Presentation
   - Example: Creator provides sustainability tips by looking into the camera, somewhere in between other video clips are inserted. Codes – Vlog, presentation.
   - Example: Video background is a screenshot of a news/magazine article, and an outline of the video creator is visible looking directly into the camera. Codes – Vlog, voice over visuals.

iii. Text over visuals only applies when:
   - The visuals are static.
   - Text does not correspond to what is being said in the video (i.e., is not an auto-generated caption or subtitle).

8. Global/Local issues

i. Think of the primary topic you identified for the video. How is it presented in the video?
   - If it is absolutely clear that the creator/presenter of the video is talking about their own surroundings (backyard, neighbourhood, country, etc.), the video focuses on local issues. The creator may still mention global information, but the main purpose of the video is to inform about and/or show the local context.

- If the video presents the primary topic in a global context, for example, by comparing or showing information from two or more countries, the video focuses on global issues. This option does not apply when global facts are merely presented without concretely specifying and emphasising the primary environmental issue in multiple regional contexts.
- Both options can be selected for videos when the primary topic is talked about equally at the local and global level.

ii. The option "not explicitly mentioned" applies when the primary topic of the video is clear, but the context isn't explicit.
- Example: A video explaining climate change without focusing on a specific country/region or making explicit regional comparisons.

iii. The option "unclear from the video" applies when neither the primary topic not the context is explicitly clear.
- Example: An environment-related video but the primary topic and the context in which environment is presented is not explicitly clear.

9. Personal/Others' experiences

i. Think about the creator/presenter of the video. Whose experiences are they sharing/showing?
- If it is absolutely clear that the creator is sharing their own experiences, select "personal experiences." If it is absolutely clear that the creator is showing someone else/documenting an event, select "others' experiences."
- Note that personal experiences do not include all sustainability tips. Only when it is clear that the creator/presenter uses the products and/or provides tips based on their own experiences, the option of "personal experiences" applies.
- Selecting both personal and others' experiences is possible when the creator/presenter of the video can be seen/heard in the video, but others are seen/heard as well (e.g., in interaction videos).

ii. The option "not explicitly mentioned" applies when the creator/presenter shares environment-related facts or information not necessarily based on their own or others' experiences.
- Example: A video where the creator ranks countries by their biodiversity levels.

iii. The option "unclear from the video" applies when the creator/presenter cannot be identified, and it is not explicitly clear whose experiences are shared.
- Example: A video compilation of biodiversity scenes with no other input from the creator (no voiceover, no narration, etc.)

10. Keying

i. Code the overall tone of the video – in what tone is the primary topic of the video presented?

ii. If a video cannot be coded as serious, pay close attention to the exact meanings of the other categories are they are closely related.
   - Note that a single answer is possible here.
   - Among the categories of funny, ironic, mocking, and pretending – select funny only if none of the other categories apply.
   - If a non-serious video can be best described as ironic, mocking, or pretending, then select any of these categories before selecting funny.

11. Communicative functions

i. Recipe videos can be considered "Conative" only when the video clearly mentions the ingredients and instructions for cooking. Aesthetically pleasing videos showing food items or food related videos that are not sufficient to take an action (i.e., cook the dish, select certain ingredients during grocery shopping, etc.) can be coded as "Referential".

ii. All interaction videos are coded as Phatic.

iii. The option "Poetic" can be selected when:
   - the video is beautifully constructed (highly produced), and no other communicative function applies.
   - The video is solely intended for aesthetic purposes and to please the viewer of the video.

Result Tables

Table B1

Krippendorff's alpha and agreement ratings for the codebook versions 2 and 4 (final version)

Round of coding (*number of videos*)	**Krippendorff's Alpha**	
	English	***Spanish***
[a]Version 2 (n_{eng} = 40)	.56	.49
Version 4 (n_{eng} = 95; n_{esp} = 95)	.83	.71

Note. Two coders analysed the data in English while three coders analysed the data in Spanish. [a]Spanish coders were trained using English videos first, so that they could understand the basis of the codebook (developed using English videos). Hence, for version 2, calculations were carried out using English data only.

Table B2

Secondary topics in environment related TikTok videos

Secondary topic	Frequency	Frequency %
Waste management	200	24.84%
Sustainability	130	16.15%
Biodiversity	118	14.66%
Environmental pollution	75	9.32%
Climate change	57	7.08%
Environmental justice	45	5.59%
Energy transition	40	4.97%
Extreme weather	39	4.84%
Technological innovation	36	4.47%
Food related	35	4.35%
Healthy living	30	3.73%

Table B3

Participation structures - context in which environmental issues were discussed in TikTok videos

Context	Frequency	Percent
Global	120	7.92%
Local	432	28.51%
Both	9	0.59%
Unclear	307	20.26%
Not explicit	647	42.71%

Table B4

Participation structures – whether the creator discussed their own or others' experiences

Experiences	Frequency	Percent
Own	544	35.91%
Others'	53	3.50%
Unclear	473	31.22%
Not explicit	445	29.37%

Table B5

Keying or tone expressed in environment related TikTok videos

Keying	Frequency	Percent
Funny	15	0.99%
Ironic	24	1.58%
Mocking	37	2.44%

Pretending	12	0.79%
Serious	1427	94.19%

Table B6

Communicative function of environment related TikTok videos

Communicative function	**Frequency**	**Percent**
Conative	381	25.15%
Emotive	81	5.35%
Metalingual	5	0.33%
Phatic	67	4.42%
Poetic	57	3.76%
Referential	924	60.99%

Table B7

Types of social actors and proportion of content produced by them on environment related TikTok

Social actor	**Number of accounts**	**%**	**Number of videos in the corpus**	**%**
Individual	447	61.57%	807	53.27%
Aggregator account	74	10.19%	201	13.27%
Agriculture farm	10	1.38%	35	2.31%
Company	28	3.86%	90	5.94%
Eco friendly brand	72	9.92%	163	10.76%
Educational organisation	3	0.41%	7	0.46%
International organisation	3	0.41%	7	0.46%
Government	5	0.69%	9	0.59%
Media	38	5.23%	52	3.43%
Sustainability organisation	46	6.34%	144	9.50%
